

Student Experience Report for Taiwan Experience Education Program

I. Personal Information

Name: S M Nahid Hasan

Country of Citizenship: Bangladesh

Graduated school and time: Daffodil International University Time: 2018

Age: 24

Passport no: BR0100715

II. Experience in Taiwan

(Content should include the course in first semester, conference, tour in Taiwan, Practice internship, conclusion, and 4 pictures at least.)

Total should be 4 pages including picture at least.

At first I want to give thanks to almighty Allah who creates the all universe. Then my lovely parents, they gave birth & maintain their responsibility to me as their children. Then thanks to Nanhua University authority for confirm my admission, then thanks from deep core from my heart to Taiwan government for accepting us & give the opportunity for study.

Everyone has a pride on his campus & department. **Nanhua University** campus is so beautiful.it is well decorate with nature. Let's talk about the interesting point about my department, mu department name is "**Green Technology for Sustainability**". Department related people are very awesome & friendly as well as well educated. The Dean, the head & the other teachers are helpful. They try their best to teach us any particular concept. The staffs are also kind to us, they also helps us a lot to face any situation.

The course we taught in last semester, it was interesting. After finishing 1st semester our teachers are visionary, they are not do anything temporary. If I study hard, work hard I will able to serve Taiwan. In near future how will Taiwan face climate change related issue?

Rapid industrialization & farming what is the effect soil & water conservation sector. I can now understand.

The teachers are not only limited us in lecture or classroom. They give us the opportunity to join conference to explore our knowledge. Hopefully, we are joining SDG conference that was held in Taichung.

The experience was amazing because I came closer a lot of educated people at a same time in a same roof. There they explore their views about their discussion topic. I was highly benefited attending there. Some of my friends are joining CSR conference that was held in Taipei. Good news was, being attending first time, they ranked 4th place among 12 team. Hopefully, we will achieve 1st place in near future.

For compatibility education on theoretical & practical work, teachers are arrange a tour on **City Bear Farm**. That is located in Changhua, T'AI-Wan, and Taiwan. The owner of the farm is our honorable professor, prof. Chen chi Chong.

In this time I was taught, how to cultivate organic honey. Types of honey bee, role of different kinds of bees in a honey bee hive, identification process of different kinds of bees, how to take care them from different kinds of insect, how to collect pollen, how to collect royal jelly, benefits of pollen & royal jelly.

Here, I was introduced another interesting insect. It is black soldier fly. It eats everything & keep your environment clean. Organic chicken & organic eggs were another specialty of City Bear Farm.

We also visited **Gold Joint Industry** that is located in Taichung. Here I was taught about pavement & other civil engineering activities.

There is a lots of educational talk, let's talk about traveling. Continuously study gives you a bored life, add some traveling time makes your life colorful. International peoples are get less opportunity to explore Taiwan. Because, without tour guide you can't go enjoy properly, that's because language problem. We can't speak Chinese, they can't speak English. Communication is a huge barrier among us. Fortunately professor arrange all.

I was visited sea (**Donsi Fishing Yard**). Here we enjoy sea magnitide. We take lunch together. During this period cultural exchange season was memorable. We were wearing traditional dress, act like a lord & other character.

Next travelling point was mountain (**Alishan Mountain**). Here I was enjoyed green natural beauty. I was also informed Japanese brutality here. They cut all the old trees & bring it to their country for making temple. Less trees are threatened to environment. Trees are environment friendly.

Another travelling destination was, **Maolin Butterfly Farm**. We were stay there 3 days & 2 nights. It was also a wonderful experience. Here I learn about Maolin Indigenous people, their life style, food habit, their community, their own home making technique, classification of butterfly, their marking ways, how to catch butterfly, how butterfly propagation, measure butterfly & many other thing. Maolin butterfly authorities are help me a lot. I am very much thankful to them.

Photo Album

Visit at Gold Joint Industry

Visit at Dhonsi Fishing Yard

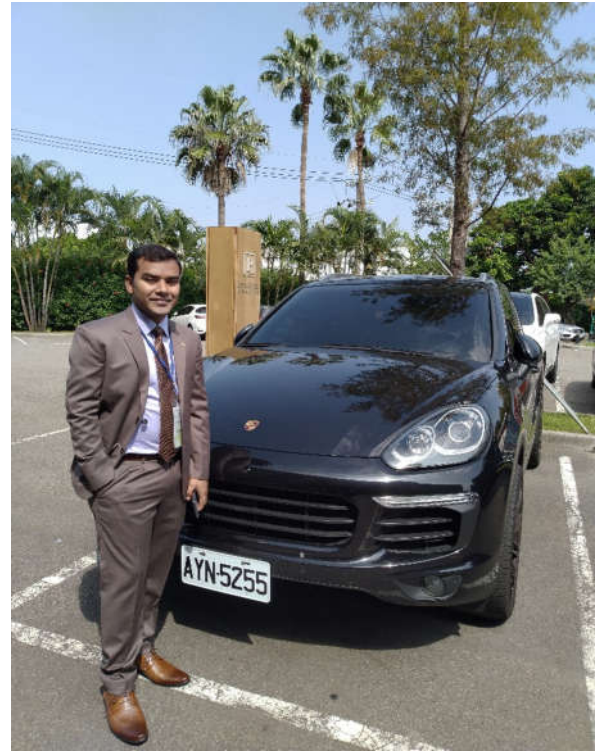

Cultural Exchange session

Visit at Alishan Mountain

Visit at city bear farm

Attending SDG Conference

Visit to maolin butterfly valley

Conclusion: It was a wonderful journey in last semester. I do not want to be short on thanks to Taiwan government & Nanhua University. Hopefully the thrilling journey continues.
